Thank you for purchasing your

## BLACK GOLD TEXAS TEA BREWER KIT

### Open and locate the following:

- Open the electric magnetic pump box. Locate the front of the pump and ensure the brass fitting is installed.
- Locate the clear 35" air hose and slide it over the brass air outlet. Locate the oxygen stone in the box and attach to the other end of the hose to the oxygen stone fitting.
- Locate the plastic drain spout in the brew bucket and install through the precut hole in the bucket. Ensure that it is sealed both inside and outside with rubber, the seals are included. Hand tighten the plastic nut on the inside of the bucket.
- Fill the bucket with water 4" below the top of the bucket. Place the bucket in full sunlight.
- Immerse oxygen stone into water and to bottom of bucket.
- Plug in the oxygen pump. Ensure it's pumping air into the bucket through the oxygen stone, making sure the air hose is sealed on both ends. **(Never immerse the electric air pump into the water.)**
- Allow the pump to run in full sunlight for one hour or more to off-gas any chlorine, typically found in municipal water. Well water can omit this step.
- Place bucket in shaded area in preparation of making your compost tea.
- Locate your mesh tea bag and bag of tea mix. Place 1 /4 of the tea mix into the tea bag, for each 5-gallon batch. Add two teaspoons of raw sugar or molasses into the water and stir.
- Attach the tea bag to the tea hook just inside the bucket while you immerse the tea bag into the water. Do not snap the lid on tight, just allow it to just sit on top of bucket.
- You are now brewing "Black Gold Texas Tea," for all of your plants. Allow your tea to brew for 24-48 hours.
- Unplug the air pump and remove the lid, tea bag and oxygen stone. Squeeze as much tea from the tea bag as possible. Empty contents of tea bag into a box and allow to dry out in preparation of reconstituting with tea mix and tea.
- Your tea is now ready to use use straight or diluted, 1 part tea three parts water using non-chlorinated water. Compost tea can be applied directly to any growth media or sprayed onto to your plants as a foliar spray.

#### Extra Bonus Splitter

Your air pump can brew up to 6 buckets of tea simultaneously. Additional stones, tea bags, tea mixes and hose kits are also sold separately.
